## About Us

Reusing old product and material as a source of raw material was considered a worthwhile but unrealistic idea. Waste are more than just a troublesome nuisance and was quick to invest in technology for extracting and processing recyclable material.

## Vision

To be leader in the recovery and conservation of the environment, under our commitment to deliver comprehensive and permanent sustainable solution to the environment Problems faced by our clients and Society.

## Mission

To provide society and our clients best solutions and tools designed to implement environmental commitments in a safe, efficient and responsible manner.

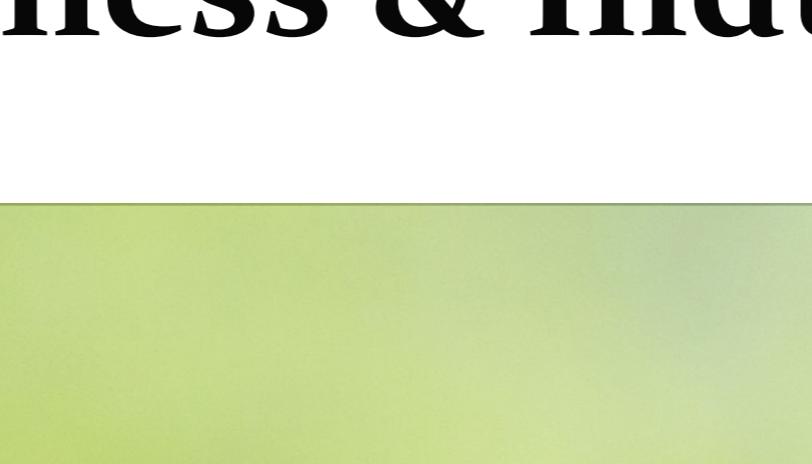

## Our Partners

In order to identify and gather resources, strategic alliances must be formed. each person adds to the company's overall philosophy. The secretariat keeps a close eye on the global development in public-private waste partnership.

The recycling of paper is a process by which waste paper is turned into new products, it has number of important benefits, helps us to save both energy and money on large scale. Every ton of paper recycled saves more than 3.3 cubic yards of landfill space, and if you measure by weight more paper is recovered for recycled Paper is a material that we're used to recycling, since 87 percent of us have access to curb side or drop off recycling for paper.

## Paper Waste

### Why recycling is important?

Recycling paper helps to reduce greenhouse gas emissions that can contribute to climate change. It takes 70% less energy and water to recycle paper than to create new paper from trees. Manufacturing with recovered paper cuts down on pollution that contributes to smog and ill health.

### What type of paper is recycled?

News paper, Magazine, cardboard, printer paper, envelopes, gift wrapping paper.

### Paper which are not Recycled?

Wax paper, Solid paper
